

典型的实现类接口代码：

```
public interface Implementor{  
    public void operationImpl();  
}
```

典型的扩充抽象类代码：

```
public class RefinedAbstraction extends Abstraction{  
    public void operation(){  
        //代码  
        impl.operationImpl();  
        //代码  
    }  
}
```

典型的抽象类代码：

```
public abstract class Abstraction{  
  
    protected Implementor impl;  
  
    public void setImpl(Implementor impl){  
        this.impl = impl;  
    }  
  
    public abstract void operation();  
}
```
