

典型的抽象命令类代码

```
public abstract class Command {  
    public abstract void execute();  
}
```

典型的具具体命令类代码

```
public class ConcreteCommand extends Command {  
    private Receiver receiver;  
  
    public void execute() {  
        receiver.action();  
    }  
}
```

典型的请求接收者代码

```
public class Receiver {  
    public void action() {  
        //具体操作  
    }  
}
```

典型的调用者代码

```
public class Invoker {  
    private Command command;  
  
    public Invoker(Command command) {  
        this.command = command;  
    }  
  
    public void setCommand(Command command) {  
        this.command = command;  
    }  
  
    //业务方法，用于调用命令类的方法  
    public void call() {  
        command.execute();  
    }  
}
```
