

## 抽象装饰类: **FilterInputStream**

```
...
protected volatile InputStream in;
protected FilterInputStream(InputStream in) {
    this.in = in;
}
...
```

## 客户端使用:

```
...
FileInputStream inFS
    = new FileInputStream("temp/fileSrc.txt");
BufferedInputStream inBS
    = new BufferedInputStream(inFS);
//定义一个字节数组, 用于存放缓冲数据
byte[] data = new byte[1024];
inBS.read(data);
...
```
